5. Source: Morningstar Research Inc., as of 9/30/2018. All rights reserved. The Morningstar Rating™ for funds, or “star rating” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Ratings metrics. The weights are 100% 3-year rating for 36–55 months of total returns, 50% 3-year rating/20% 5-year rating/20% 3-year rating for 60 –119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all three rating periods. Morningstar Rating is for the F share class only; other classes may have different performance characteristics. Please refer to www.morningstar.ca for more details on the calculation of Morningstar Risk-Adjusted Ratings and the one-year information.
