

Product Profile

Product Detail

Fund Assets	\$524,797,432.92
Fund Inception Date	12/22/2003
Base Currency	CAD
Benchmark Name	FTSE Canada Short Term Overall Bond Index
Distribution Frequency	Monthly

Fund Description

The Fund seeks high current income and preservation of capital by investing primarily in Canadian fixed income securities, including Canadian federal and provincial government bonds, corporate bonds, debentures and short term notes. The Fund may also invest in securities backed by mortgages or other financial assets and dividend-paying shares of Canadian companies. The Fund may invest in foreign fixed income securities. The average weighted term to maturity of the Fund's investments is five years or less.

Performance Data¹

Average Annual Total Returns² (%)

	3 Mths	YTD	1 Yr	3 Yrs	5 Yrs	10 Yrs	Since Inception (12/22/2003)
Series O	0.45	0.91	2.24	4.05	3.08	3.07	3.79
FTSE Canada Short Term Overall Bond Index	0.08	-0.44	0.03	3.09	1.86	2.08	3.22

The indicated rates of return are the Series O historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account investment management fees, sales, redemption, distribution or optional charges or income taxes payable by any securityholder that would have reduced returns.

1. The fund offers other series subject to different fees and expenses, which will affect their performance.
 2. Periods shorter than one year are shown as cumulative total returns.

Portfolio Manager Insight³

Performance Review

QUARTERLY KEY PERFORMANCE DRIVERS

HELPED	Foreign currency and asset allocation were additive, as the Canadian dollar weakened throughout the quarter and US-dollar denominated high yield bonds continued to outperform.
	Security selection lifted performance primarily on strength from Canadian high yield securities, which was partly offset by selection in Federal securities.
	Yield curve and duration positioning also lifted results. The Canadian yield curve slightly steepened as rates increased broadly across the curve. The largest increase was in long-term rates, which was beneficial for the fund's underweight exposure.
HURT	Selection in federal securities detracted from relative returns.

Outlook & Strategy

- COVID-19 cases globally are falling after a fourth summer wave. U.S. restrictions have largely been lifted and Canada is not far behind as vaccination rates have ramped higher. Near-term economic aftershocks are, however, proving an impediment to recovery, especially on the supply side where labour shortages, lack of inventory and shipping delays in some industries have contributed to rising prices. Elevated inflation will prove sticky and likely continue through the rest of 2021 before receding early in 2022 as these problems are resolved.
- We expect corporate credit will continue to outperform due to the strong fundamental and technical backdrop, although returns are likely to be more subdued given current valuations. Overall, we remain methodical in our credit decisions and will continue to add selectively to corporate exposure where we see strong balance sheets, experienced management teams and solid business strategies.

Portfolio Characteristics^{a,b,c}

	Portfolio	FTSE Canada Short Term Overall Bond Index
Weighted Average Yield to Worst	1.52%	0.98%
Average Credit Quality ⁴	A	AA
Average Coupon	3.03%	2.19%

3. The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

4. The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies, is provided to indicate the average credit rating of the portfolio's underlying bonds and generally ranges from AAA (highest) to D (lowest). The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of debt holdings by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower rated bonds. The ACQ is provided for informational purposes only. Derivatives are excluded from this breakdown.

5. Please note that the definition of cash in this document may not match the definition of "cash and cash equivalents" listed in the fund facts or management reports of fund performance for the fund, which includes bonds that have a remaining term to maturity of 365 days or less that are issued by certain governments, supranational agencies or financial institutions and have a "designated rating" (as defined in Canadian securities law). As such, the cash amounts listed may differ.
6,7,8. The negative cash position reflects a temporary position that is a result of a delay in securities settlement transactions.

Supplemental Performance Statistics

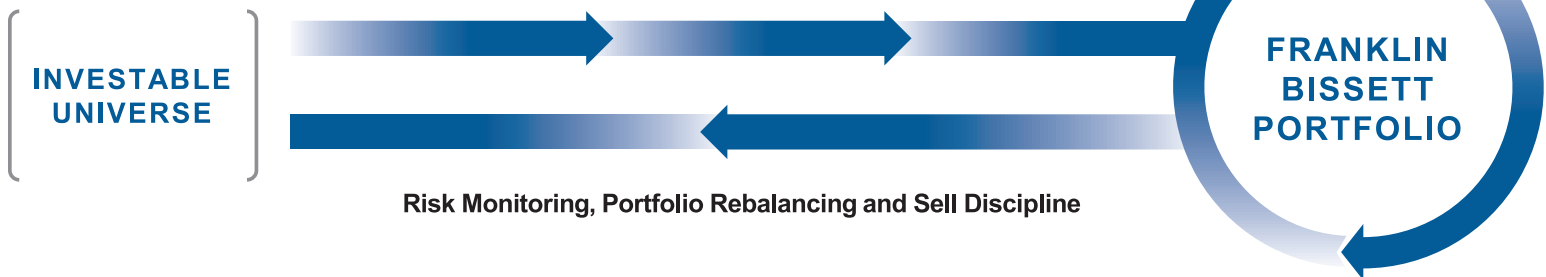

Supplemental Risk Statistics^{9,10}

	3 Yrs	5 Yrs	10 Yrs	Since Inception
Standard Deviation (%)	2.69	2.33	1.95	1.89
Tracking Error (%)	2.13	1.68	1.35	1.08
Information Ratio	0.45	0.72	0.74	0.54
Beta	1.39	1.28	1.13	0.97
Sharpe Ratio	1.12	0.92	1.12	1.19

The indicated rates of return are the Series O historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account investment management fees, sales, redemption, distribution or optional charges or income taxes payable by any securityholder that would have reduced returns.

Investment Philosophy and Process^{*}

1. Truly active portfolio management, focusing on Canada with potential for enhanced returns through global diversification
2. Superior long-term performance can be achieved by investing in bonds having favourable risk/return characteristics and backed by quality management with a whole stakeholder approach
3. Focus on interest rate risk alone is insufficient; successful fixed income investors also must be vigilant in managing credit risk and reinvestment risk
4. Consistent, superior absolute, relative and risk-adjusted performance

*The above chart is for illustrative and discussion purposes only. The way we implement our main investment strategies and the resulting portfolio holdings may change depending on factors such as market and economic conditions.

9. Beta, Information Ratio and Tracking Error information are measured against the FTSE Canada Short Term Overall Bond Index.

10. Information Ratio is a way to evaluate a manager's ability to outperform a benchmark in relation to the risk that manager is assuming, with risk defined as deviation from the benchmark. This measure is calculated by dividing the portfolio's excess return (portfolio return less the benchmark return) by the tracking error (derived by taking the standard deviation of the monthly differences between the portfolio return and the benchmark return over time).

Glossary

Average Coupon: The average interest rate stated on the securities held by a portfolio.

Average Credit Quality: The credit rating of a bond is an assessment of the creditworthiness of individuals and corporations. It is based upon the history of borrowing and repayment, as well as the availability of assets and extent of liabilities. The average credit quality of a fund reflects the holdings of the underlying issues, based on the size of each holding. Usually we quote the average credit quality as per Standard & Poor's or Moody's credit rating agencies.

Average Duration: A measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

Average Weighted Maturity: An estimate of the number of terms to maturity, taking the possibility of early payments into account, for the underlying holdings. Maturity is expressed as a number of years.

Beta: A measure of the magnitude of a portfolio's past share-price fluctuations in relation to the ups and downs of the overall market (or appropriate market index). The market (or index) is assigned a beta of 1.00, so a portfolio with a beta of 1.20 would have seen its share price rise or fall by 12% when the overall market rose or fell by 10%.

Information Ratio: In investing terminology, the ratio of expected return to risk. Usually, this statistical technique is used to measure a manager's performance against a benchmark. This measure explicitly relates the degree by which an investment has beaten the benchmark to the consistency by which the investment has beaten the benchmark.

Sharpe Ratio: To calculate a Sharpe ratio, an asset's excess returns (its return in excess of the return generated by risk-free assets such as Treasury bills) are divided by the asset's standard deviation.

Standard Deviation: A measure of the degree to which returns vary from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that performance will fluctuate from the average return.

Tracking Error: Measure of the deviation of the return of a product compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment is managed, the smaller the tracking error.

Yield to Worst: The yield to maturity if the worst possible bond repayment takes place. If market yields are higher than the coupon, the yield to worst would assume no prepayment. If market yields are below the coupon, the yield to worst would assume prepayment. In other words, yield to worst assumes that market yields are unchanged. Normally this value is not aggregated since it varies but if a weighted average value is used for a portfolio then the figure will reflect the values of the underlying issues, based on the size of each holding.
