

Franklin U.S. Monthly Income Fund Series T-CAD

Income | Factsheet as of November 30, 2025

Investment Overview

The fund seeks to maximize income while maintaining prospects for long-term capital appreciation by investing primarily in a diversified portfolio of dividend-paying stocks, bonds and convertible securities issued in the U.S.

Fund Highlights

- **Flexible and opportunistic investment approach.** The fund sets no formal targets with respect to its equity and fixed-income allocation, and looks opportunistically across the capital structure to focus on investment opportunities that offer the most compelling risk-reward profiles.
- **A strategic approach to income.** The fund is structured to generate income while maintaining the prospect for long-term capital gain by investing strategically in dividend-paying stocks, bonds and convertible securities.
- **Experienced management team.** Having joined Franklin Templeton in 1992, Ed Perks, CFA, has been the lead portfolio manager of the strategy since 2004.

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. Investment return and principal value will fluctuate with market conditions, and you may have a gain or loss when you sell your units.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus or fund facts document before investing. The indicated rates of return are historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently, and past performance may not be repeated.

Series T distributions are automatically reinvested unless otherwise requested. Series T may also pay a distribution that must be reinvested in December, consisting of income and capital gains.

Growth of \$10,000

Inception through November 30, 2025, Excluding Effects of Sales Charges

Glossary

Yield to Maturity ('YTM'): is the rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Yield to Maturity is calculated without the deduction of fees and expenses.** **Turnover** is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. **Average Credit Quality**: The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness. **Price to Book**: The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds. **Weighted Average Maturity**: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings.

Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

Portfolio Data Information

Holdings are provided for information purposes only and should not be deemed a recommendation to buy or sell the securities mentioned.

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available.

Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the Fund's portfolio does not apply to the stability or safety of the Fund. These ratings are updated monthly and may change over time. **Please note, the Fund itself has not been rated by an independent rating agency.**

Important Information

Mutual fund securities are not covered by the Canada Deposit Insurance Corporation or by any other government deposit insurer. There can be no assurances that the fund will be able to maintain its net asset value per security at a constant amount or that the full amount of your investment in the fund will be returned to you.

Maximum target annual distribution rate on Series T varies between 5% to 8%, set for the individual fund or portfolio. Annual target distributions are subject to change at the discretion of Franklin Templeton Investments. Investors may choose their desired Return of Capital (ROC) cash payout rate, the remainder will be reinvested in additional Series T units/shares of the same fund or portfolio. An investor's adjusted cost base (ACB) will be reduced by the amount of any ROC payments. If the investor's ACB goes below zero, they will have to pay capital gains tax on any further ROC distributions. Series T may also pay an annual income distribution and capital gains which must be reinvested but will be taxable in the year received. The payment of income distributions is not guaranteed and may fluctuate. Income distributions and ROC cash flow payments are not an indication of performance, rate of return, or yield. If distributions paid by a fund are greater than the return of the fund, the value of the investor's investment will decrease. Investors should obtain advice from a qualified tax specialist on taxation matters.
