

Franklin Quotential Growth Portfolio Series T-CAD

Target Risk | Factsheet as of February 28, 2026

Investment Overview

Long-term capital appreciation by investing primarily in a diversified mix of equity mutual funds, with additional stability derived from investing in income mutual funds.

Fund Highlights

- **Actively Managed for Long-Term Growth** Portfolio Managers target a long-term, strategic asset allocation of 80% equity/20% fixed-income, providing a foundation for a moderately aggressive risk/return profile. Managers actively shift allocations to position the portfolio for short-term opportunities as economic and market conditions change.
- **Diversified for Greater Opportunities** Combining global investments allows investors to participate in emerging growth and income opportunities worldwide and potentially helps lower risk over time.
- **Carefully Constructed with Risk in Mind** Within an equity mandate, the Portfolio Managers balance opportunities between management styles, regions, market caps and income quality to take advantage of economic and market cycles.

Total Returns

	Cumulative				Average Annual				Inception	
	1-Mo	3-Mo	6-Mo	YTD	1 Year	3-Yr	5-Yr	10-Yr	Inception	Date
Series T - CAD	2.80	3.81	10.48	4.26	14.99	14.76	9.35	7.86	5.28	6/14/2007

Calendar Year Returns (%)

	2025	2024	2023	2022	2021	2020	2019	2018	2017	2016
Series T - CAD	13.32	18.33	11.77	-11.45	13.77	8.47	13.80	-6.93	7.51	2.03

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. Investment return and principal value will fluctuate with market conditions, and you may have a gain or loss when you sell your units.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus or fund facts document before investing. The indicated rates of return are historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently, and past performance may not be repeated.

Series T distributions are automatically reinvested unless otherwise requested. Series T may also pay a distribution that must be reinvested in December, consisting of income and capital gains.

Glossary

Yield to Maturity ('YTM'): is the rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Yield to Maturity is calculated without the deduction of fees and expenses.** **Turnover** is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. **Weighted Average Maturity**: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. **Dividend Yield** is the annual dividend received on an equity security as a percentage of the price. For a portfolio, the value represents a weighted average of the stocks it holds. It should not be used as an indication of the income received from this portfolio. **Dividend Yield is calculated without the deduction of fees and expenses.**

Portfolio Data Information

Holdings are provided for information purposes only and should not be deemed a recommendation to buy or sell the securities mentioned.

Important Information

Mutual fund securities are not covered by the Canada Deposit Insurance Corporation or by any other government deposit insurer. There can be no assurances that the fund will be able to maintain its net asset value per security at a constant amount or that the full amount of your investment in the fund will be returned to you.

Maximum target annual distribution rate on Series T varies between 5% to 8%, set for the individual fund or portfolio. Annual target distributions are subject to change at the discretion of Franklin Templeton Investments. Investors may choose their desired Return of Capital (ROC) cash payout rate, the remainder will be reinvested in additional Series T units/shares of the same fund or portfolio. An investor's adjusted cost base (ACB) will be reduced by the amount of any ROC payments. If the investor's ACB goes below zero, they will have to pay capital gains tax on any further ROC distributions. Series T may also pay an annual income distribution and capital gains which must be reinvested but will be taxable in the year received. The payment of income distributions is not guaranteed and may fluctuate. Income distributions and ROC cash flow payments are not an indication of performance, rate of return, or yield. If distributions paid by a fund are greater than the return of the fund, the value of the investor's investment will decrease. Investors should obtain advice from a qualified tax specialist on taxation matters.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products with at least a three-year history, and subject to change monthly. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total return, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total return. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads. Morningstar Rating is for the specified share class(es) only; other classes may have different performance characteristics.
