

Franklin FTSE U.S. Index ETF (FLAM)

Blend | Factsheet as of March 31, 2026

Investment Overview

Franklin FTSE U.S. Index ETF seeks to replicate, to the extent reasonably possible before fees and expenses, the performance of the FTSE USA Index, or any successor thereto. It invests primarily in equity securities of large- and mid-capitalization U.S. issuers.

Fund Highlights

- Execute views on U.S. within your regional North American exposure.
- Provides targeted exposure to large- and mid-sized companies in the U.S.
- Seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the FTSE USA Index.

Total Returns

	Cumulative				Average Annual				Inception	
	1-Mo	3-Mo	6-Mo	YTD	1 Year	3-Yr	5-Yr	10-Yr	Inception	Date
Market Price Return	-3.03	-3.52	-2.52	-3.52	13.39	19.27	13.54	—	14.96	2/20/2019

NAV Returns	12.13	36.05	23.28	-13.67	25.35	18.30	—	—	—	—

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. Investment return and principal value will fluctuate with market conditions, and you may have a gain or loss when you sell your units.

Commissions, management fees, brokerage fees and expenses may be associated with investments in ETFs. Please read the prospectus and ETF facts before investing. ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETF's net asset value. Brokerage commissions and ETF expenses will reduce returns. Performance of an ETF may vary significantly from the performance of an index, as a result of transaction costs, expenses, and other factors. Indicated rates of return are historical annual compounded total returns for the period indicated, including changes in unit value and reinvestment distributions, and do not take into account any charges or income taxes payable by any security holder that would have reduced returns. ETFs are not guaranteed, their values change frequently, and past performance may not be repeated.

Glossary

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Portfolio Data Information

Holdings are provided for information purposes only and should not be deemed a recommendation to buy or sell the securities mentioned.

Important Information

ETF units may be bought or sold throughout the day at their market price on the exchange on which they are listed. However, there can be no guarantee that an active trading market for ETF units will develop or be maintained, or that their listing will continue or remain unchanged. While the units of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress.
