

Franklin Canadian Monthly Income and Growth Fund Series A-CAD

Income | Factsheet as of October 31, 2025

Investment Overview

Balance of income and capital appreciation by investing primarily in a diversified portfolio of income-generating Canadian, U.S. and global equities, equity-related securities and fixed-income securities.

Fund Highlights

- **Unlocking opportunities across the capital structure.** The strategy provides flexibility to invest across the capital structure with emphasis on seeking to generate the best income and capital appreciation opportunities from Canadian and U.S. companies.
- **Benefit from multiple sources of income.** The fund seeks to provide a sustainable cash flow from multiple sources: Canadian and U.S. common equity, preferred shares, Canadian and foreign fixed income, covered call option premiums and convertible debentures. Writing covered call options is expected to enhance yield generated by the strategy, as well as the flexibility of investing in a broader opportunity set.
- **Diversified exposure.** Constructed around a broad set of lower correlated positions from the Canadian and U.S. market, the portfolio seeks to provide stability and ease the investor's exposure to market swings.

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. Investment return and principal value will fluctuate with market conditions, and you may have a gain or loss when you sell your units.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus or fund facts document before investing. The indicated rates of return are historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently, and past performance may not be repeated.

Growth of \$10,000

Inception through October 31, 2025, Excluding Effects of Sales Charges

Glossary

Yield to Maturity ('YTM'): is the rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Yield to Maturity is calculated without the deduction of fees and expenses.** **Turnover** is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. **Weighted Average Maturity:** An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. **Yield to Worst:** The yield to maturity if the worst possible bond repayment takes place. If market yields are higher than the coupon, the yield to worst would assume no prepayment. If market yields are below the coupon, the yield to worst would assume prepayment. In other words, yield to worst assumes that market yields are unchanged. Normally this value is not aggregated since it varies but if a weighted average value is used for a fund then the figure will reflect the values of the underlying issues, based on the size of each holding. **Yield to Worst is calculated without the deduction of fees and expenses.**
