

Franklin Quotential Balanced Growth Portfolio Series OT-CAD

Target Risk | Factsheet as of February 28, 2026

Investment Overview

A balance of current income and long-term capital appreciation by investing in a diversified mix of equity and income mutual funds, with a bias towards capital appreciation.

Fund Highlights

- **Actively Managed for Growth and Income** Maintaining a moderate risk/return profile by targeting a portfolio allocation of 60% equity and 40% fixed income, Portfolio Managers actively shift allocations to position the portfolio for short-term opportunities as economic and market conditions change.
- **Globally Diversified for Greater Opportunities** Combining global investments allows investors to participate in emerging growth and income opportunities worldwide and potentially helps lower risk over time. The result is an actively managed portfolio, diversified across multiple countries and multiple industry sectors.

Total Returns

	Cumulative				Average Annual				Inception	
	1-Mo	3-Mo	6-Mo	YTD	1 Year	3-Yr	5-Yr	10-Yr	Inception	Date
Series OT - CAD	2.55	3.53	9.62	3.93	13.81	14.12	9.09	8.50	6.82	6/14/2007

Calendar Year Returns (%)

	2025	2024	2023	2022	2021	2020	2019	2018	2017	2016
Series OT - CAD	12.64	16.54	12.31	-9.96	12.04	10.62	13.95	-3.28	8.74	4.60

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. Investment return and principal value will fluctuate with market conditions, and you may have a gain or loss when you sell your units.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus or fund facts document before investing. The indicated rates of return are historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently, and past performance may not be repeated.

Glossary

Yield to Maturity ('YTM'): is the rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Yield to Maturity is calculated without the deduction of fees and expenses.** **Turnover** is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. **Weighted Average Maturity**: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. **Dividend Yield** is the annual dividend received on an equity security as a percentage of the price. For a portfolio, the value represents a weighted average of the stocks it holds. It should not be used as an indication of the income received from this portfolio. **Dividend Yield is calculated without the deduction of fees and expenses.**
